LinkedIn

Summary

- 4+ years of experience in the design and development of high-quality software applications.
- Proficient in Java, Spring Boot, Spring Data JPA, Microservices, REST APIs, and Spring Security, with hands-on experience in Spring AI for LLM-based integrations, along with Apache Kafka, Redis Cache, and Spring Batch for business operations.
- Skilled in unit testing (JUnit, Mockito), code reviews, and clean coding practices.
- Strong database experience with MySQL.
- Frontend development using HTML, CSS, JavaScript, Typescript, Bootstrap, and Angular, React.
- knowledge with DevOps tools: GitHub, Maven, SonarQube, Swagger, Postman, Docker, Jenkins, Kubernetes,
- Familiar with AWS services: EC2, S3, RDS, IAM, Lambda, CloudWatch, ECS, EKS.

SKILLS

- **Backend:** Java, J2EE, Spring, Spring Boot, Spring Security, Microservices, Spring AI
- **AI & Intelligent Integration:** LLM Integration, Prompt-based API Design
- **Frontend:** HTML, CSS, JavaScript, Bootstrap, TypeScript, Angular, React
- **Web Services:** REST API design knowledge
- **Database:** MySQL
- **Operating Systems:** Windows, Linux (Red Hat, Ubuntu)
- **Development Tools & Frameworks:** Log4j, Postman, Swagger, JUnit, Mockito, Apache Kafka, Redis, Spring AI, Visual Studio Code, Jira, Spring Tool Suite, IntelliJ IDEA.
- **DevOps:** Maven, Gradle, GitHub, Jenkins, SonarQube, Docker, Kubernetes (K8s),
- **Cloud (AWS):** EC2, EBS, S3, RDS, Route 53, IAM, VPC, CloudWatch, SNS, Lambda, ECS, EKS.
- **Source and Version Control:** Git, GitHub
- Requirements Gathering and Analysis
- Debugging and Troubleshooting
- Testing & maintenance
- Software Development Lifecycle(SDLC) and Agile/SCRUM Methodologies
- Being flexible enough to adjust to big changes in either environment or technology
- Good work ethic and Excellent attention to detail
- Strong feeling of ownership, desire to produce high-quality work, ability to execute quality control on deliverables
- Excellent analytical and problem-solving skills

PROFESSIONAL EXPERIENCE

Full Stack Java Developer

May 2026 — Present
Andheri

Horizontal

Project: SMILE

Client: Expleo | End Client: ECGC

Domain: Export Credit Insurance | Enterprise Resource Planning (ERP) | Trade Finance

Technical Domain: Java, Spring Boot, Microservices, REST APIs, Feign Client, PostgreSQL, RabbitMQ, Thymeleaf, JavaScript, jQuery, DataTables, Java SecureRandom, NamedParameterJdbcOperations, ELK, SQL

- **Engineered** modular backend business logic using **Java/Spring Boot** microservices and **RESTful APIs** for the **SMILE** platform, decoupling core insurance workflows to improve service maintainability and scalability.
- **Architected** the **DVR Visit Form** module with exporter/IE lookup APIs and **Office ID-based access control**, preventing unauthorized record access and enforcing a strict 30-day data edit lock policy.
- **Optimized** policyholder and exporter record discovery by building a searchable lookup feature with **Spring Boot**, **Feign Client**, and **DataTables (Thymeleaf/jQuery)**, slashing search latency and operational turnaround times.
- **Synchronized** distributed payment advice and vendor settlement records using **Feign Client** and **PostgreSQL** transactional boundaries, eliminating data discrepancies and ensuring 100% state consistency across downstream services.
- **Implemented** an auditable payment tracking mechanism leveraging **Java SecureRandom** with PostgreSQL constraint validation, guaranteeing non-repeating, collision-free transaction IDs for regulatory compliance.
- **Integrated** external Credit Rating Agency (**CRA**) endpoints using customized JSON DTO request/response mappers, eliminating cross-service contract mismatches and accelerating risk assessment workflows.
- **Deployed** an asynchronous notification pipeline using **RabbitMQ** with Dead Letter Queue (DLQ) retry mechanisms, securing 99.9% guaranteed message delivery during downstream system outages.

- **Streamlined** database persistence using **NamedParameterJdbcOperations** and **PostgreSQL** within a layered DAO architecture, accelerating query execution times while neutralizing SQL injection vulnerabilities.
- **Standardized** dual-layer form validation across UI (**Thymeleaf/JavaScript**) and API layers with **Spring Boot/Hibernate Validator**, reducing invalid claim payload submissions and maintaining high data integrity.
- **Accelerated** root-cause resolution of production/UAT bottlenecks across UI mappings, date conversions, and financial calculations using **ELK Stack** log analysis and SQL profiling, cutting MTTR significantly.

Java Developer (Workforce Management, Security Operations & Facility Access Control) **October 2025 — May 2026**

Aniktantra

Navi Mumbai

Developed and supported workforce-management applications for housekeeping operations, security operations, and facility access control.

Projects: Housekeeping Task Management System, DRS, Headcount Management System

Technical Environment: Java, Spring Boot, Spring Data JPA, Hibernate, REST APIs, MySQL, Microsoft SQL Server, JSch (SSH), AES Encryption, JSP, jQuery, Apache POI, Oracle Cloud Infrastructure (OCI), Flutter.

- Developed **RESTful APIs** using **Java** and **Spring Boot** for role-based workforce-management modules, enabling integration with mobile and web applications.
- Built modules for housekeeping staff, site supervisors, guards, field officers, regional managers, and facility-access users based on role-specific business workflows.
- Implemented secure remote database connectivity through **JSch-based SSH tunnels**, protecting communication between application services and remote **MySQL** databases.
- Designed and implemented **AES encryption** for authorization headers, user credentials, and sensitive request payloads to reduce the risk of tampering and unauthorized access.
- Created and optimized native **SQL queries** using **JPA EntityManager** to generate task-completion, attendance, performance, and management reports.
- Developed geo-fenced attendance marking and offline data-synchronization features to support field users in low-connectivity locations.
- Implemented **Spring Data JPA** and **Hibernate** persistence layers for attendance and facility-access data stored in **Microsoft SQL Server**.
- Built dynamic **JSP** and **jQuery**-based frontend integrations for access-control and attendance-management workflows.
- Processed **IN** and **OUT** device data to generate real-time headcount summaries, attendance logs, and overtime-related information.
- Integrated **Apache POI**-based functionality to securely export attendance and overtime reports to Excel format.
- Developed a **Spring AI-based proof of concept** for context-aware operational guidance and intelligent summaries, enabling natural-language queries over workforce data using **LLM integration**.

Full Stack Java Developer (eCommerce and Online Retail)

Jan 2024 — Sept 2025

MultiSpark Technologies

Kolhapur

Project: Project Zenith

Technical Domain: Java, Spring Boot, Microservices, MySQL, Kafka, Redis, AWS, Angular, React.js

Project Summary: Collaborated in a team to build and deploy a scalable eCommerce web application with features like product browsing, cart management, order placement, payment simulation, and real-time email alerts.

- Collaborated in developing RESTful APIs using **Spring Boot**, contributing to noticeable performance improvements.
- Implemented batch jobs and email notifications using **JavaMail API** to enhance automation and user communication.
- Achieved 90%+ unit test coverage using **JUnit** and **Mockito**; ensured code quality by following clean code practices and using **SonarQube**.
- Integrated Swagger UI for REST API documentation and testing.
- provided knowledge transfer (KT) sessions and mentors junior developers.

Software Engineer (Insurance – Property & Casualty)

June 2022 — Dec 2023

Capgemini Technology Services India Pvt. Ltd.

Navi Mumbai

Project : Liberty Insurance – Policy Processing & Claims Management

Technical Domain: Java, Spring Boot, REST API, React.js, JUnit, Mockito, Git, Jenkins, Docker, MySQL, Postman, Agile (Scrum)

Project Summary: Developed a microservices-based insurance system to automate policy issuance and claims management. The objective was to accelerate processing speed, minimize manual intervention, and enable third-party system integration.

- Developed unit and integration tests using JUnit & Mockito, achieving 80%+ code coverage.
- Contributed to code reviews and KT sessions, enhancing backend and domain expertise.
- Integrated Swagger UI for REST API documentation and testing.

EDUCATION

Bachelor of Engineering in Electrical Engineering, P.E.S. Modern College of Engineering, Pune
CGPA: 7.34 / 10 **Aug 2017 — May 2020**

Diploma in Electrical Engineering, K.B.P. Polytechnic, Satara
Percentage: 79.80% **Aug 2013 — May 2017**
